

# The **BBS** Zine

## Issue 1: Bold Imaginings

By mhj

In this issue: A 80's Apple II BBS  
And A 90's Manila BBS!

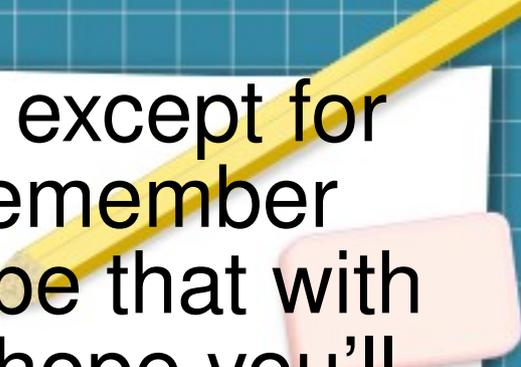

# Foreward

A yellow pencil and a pink eraser are positioned in the top right corner of the page, appearing to be on the paper.

A BBS(Bulletin Board System) Zine in 2019? You've gotta be mad, they'll say. Well, stranger things have happened.

In any case, I thought what I'd do was, show that BBSes are still around and are still fun places to be!

The other objectives of this zine is to show tips & tricks of how to use BBSes, setting up your own, BBS clients, door games and everything else BBS related. This zine will be published on as many sites as I can do it, usually in PDF form.

BBSes are nowadays of little activity, except for the occasional login by those who remember them. I want to change that, and I hope that with this zine, that will come to fruition. I hope you'll come to understand that these types of places deserve as much attention as any other community.

With the increasing government and corporate interference into our daily lives online, it's become more and more important that we find outlets to discuss things. For some people, I feel that BBSes are perfect, because each BBS has its own feel to it, as though it were a land of its own.

Let's start our journey into these lands now!  
First up, A 80's Apple II BBS.

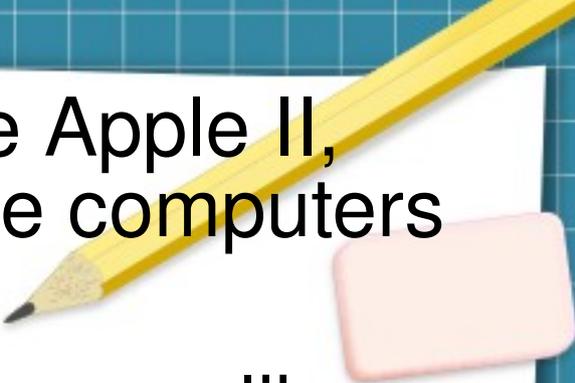

# A 80's Apple II BBS

```
SyncTERM - A 80's Apple II BBS
Ctrl-S Stop/Start  Spacebar to Exit

A 80's
Apple II
BBS

(*> Welcome to A 80's Apple II BBS <*)
User Number ('New' =New User)
-->
```

A 80's Apple II BBS runs on a genuine Apple II, and it was one of the best selling home computers in America.

Now, when I say home computer, do I mean like the computers we have now? Not at all. Home computers generally lacked what we consider important for a computer nowadays. They could still do things like print, program, and do accounting and games, but most used tapes as their method of program loading, because otherwise you were presented with a screen that booted up into BASIC and that was it.

BASIC on most of the computers was very powerful, however, and the great things about computers of that era was that there was no layers between user and computer interaction. What you typed was what happened!

This BBS is a reminder of that era. Everything is slow-going, but it has tons of interesting details for you to check out. This is the help screen.

*****
*   A 80s Apple II BBS commands   *
*-----*
*  <(B)> Goto the Bulletin Boards  *
*-----*
* (R)ead !   E -> Examine your stats *
* (S)end !   F -> Feedback to Sysop  *
* mail !     G -> General files menu *
*-----+   H -> Get detailed help   *
* $ = News   O -> Other BBS numbers  *
* I = Info   T -> Terminate session  *
* C = Chat   U -> Get a user listing  *
*-----*
* D -> Define system display parms  *
* P -> Change / Update your password *
* V -> Vote on your computer equipt *
* X -> Goto the transfer sub-system  *
*****

Command (?=Help):_
```

All in all I'd say that I am very impressed with the level of dedication put towards the maintaining of the system. The SysOp gets a thumbs-up from me!

Here's a screenshot of the info menu.

```
SyncTERM - A 80's Apple II BBS
-----
ASCII Art and Recepies
-----
In Genral Files - "G" from main menu

The War Games Game
-----
Play the role of Jennifer and David.
Find the backdoor on A 80's Apple II BBS.
Meet Joshua and get the present.

To find the backdoor watch the movie War Games and identify the way the
backdoor to Joshua is found in the movie. How/ who and what was used to find
it. The secret word is spoken out in the movie loud and clear.

Cloud Service For Classic Computer
-----
A 80's Apple II BBS offers a Cloud Service for all classic computer. The
service is free but you have to get a special security level to be able to use
it - please ask the Sysop. With the service you can send and receive any text
file from and to any computer in the world. Write a text on your Tandy 100 at a
Hawaiian beach - send it to the cloud and download it in your castle in
Scotland to Word Juggler on your Apple II or to Word on your MacBook.

Command (?=Help):
```

# A 90's Manila BBS

```
SyncTERM - A 90's Manila BBS
Mystic BBS v1.12 A34 for Linux Node 2
Copyright (C) 1997-2017 By James Coyle

Detecting terminal emulation: ANSI detected.

Welcome to:
A 90's Manila BBS

e-mail: michael.balcos@gmail.com

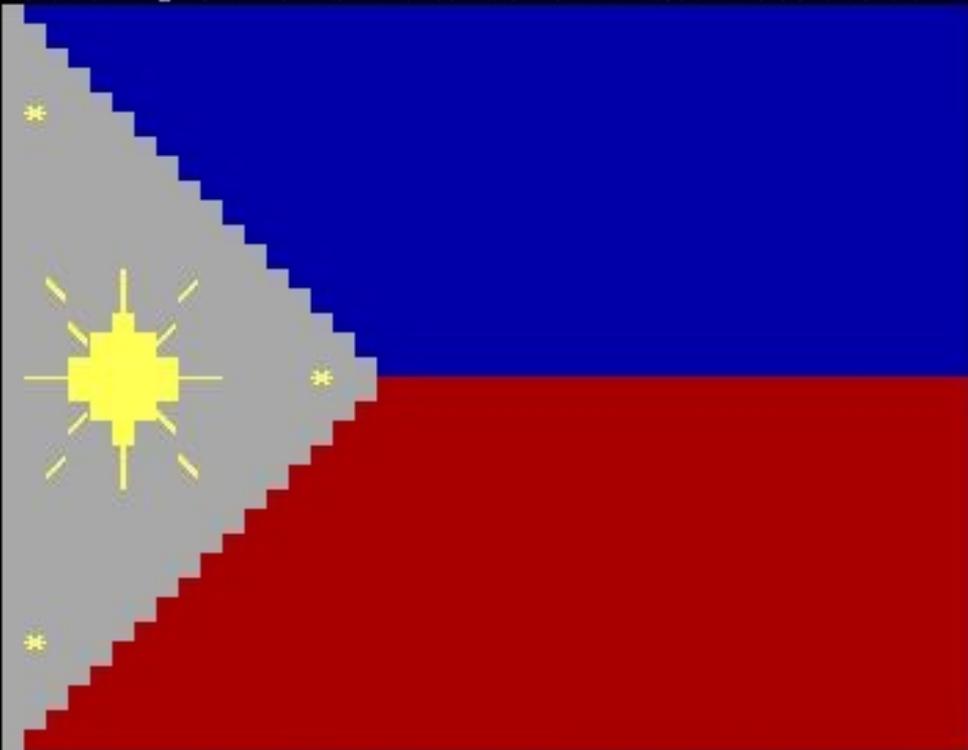

System Operator: Michael Balcos
Nodes: 12
Online: 24x7

Fidonet address: 3:772/500
fsxnet address: 21:1/192

Launched: 12/30/16, 7:03AM, PHT

Happy BBSing! :)

Enter your user name: 
```

A 90's Manila BBS is certainly one of a kind, just as was A 80's Apple II BBS. However, what sets this one apart is the fact that there multiple door games and demos.

Now, I didn't try any of the games or demos, as they also had a files area, which I assume is for BBS software and the like. Overall, they seemed to present a kind of idyllic setting for a community to be, but, there was one problem I could see, and that was that the system itself hadn't seen any updates since 2017.

Hopefully more BBS System Operators(SysOps) will be around the communities they create.

# The main menu.

```
SyncTERM - A 90's Manilla BBS
MAIN MENU
-----
Time left: 1439 mins

Group....: Local file areas
Area.....: None
Command ->
```

# Guide to BBS clients

Now, as far as clients go, there are certainly a multitude of them. I'd say it really depends on your operating system.

The greatest success I've had is with the SyncTerm client, but I've also heard that NetRunner and Qodem are good as well. I'd say to give all of them a try and see which one works best for you. The nice thing about SyncTerm, however, is that you can import the list of BBSes from the Telnet BBS Guide site and easily dial into any BBS on the menu. Makes it quick and easy to get up and running in the world of BBSes! I don't know if you can do that with other clients.

# Frequently Asked Questions

What is a BBS?

- A BBS is a Bulletin Board System, usually hosted on an individual's server, sometimes in their home or on a Virtual Private Server. They were huge in the 80's and 90's before the advent of the world wide web. The main benefit back then was that it was easy to find a local community, files, email and other things just by dialing in to one.

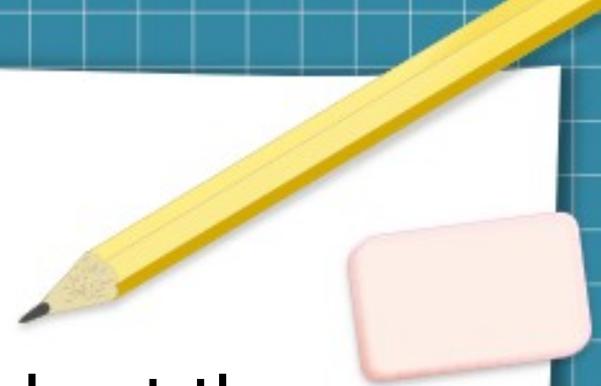

# Contact

You can contact me, mhj, on the web at the following address:

[mhj@sdf.org](mailto:mhj@sdf.org)

Please include a subject line or else I will assume it is spam. Also, I can't respond from that email, as I only have an ARPA account on SDF, so expect one from my Tutanota account.

Thank you.
